ADDITION 1°

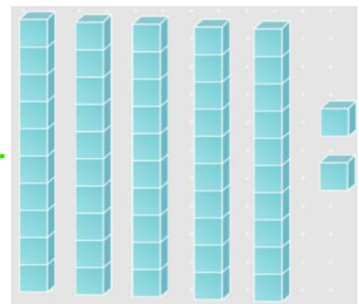
ADDITION – Practice exercises

Exercise 1

	T	O
	5	2
+	3	5

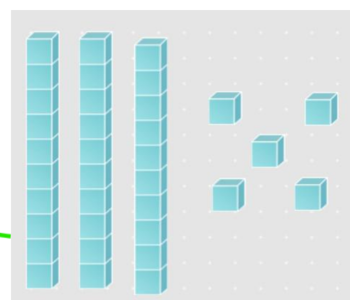
1. Represent the number on the top.

	T	O
	5	2
+	3	5



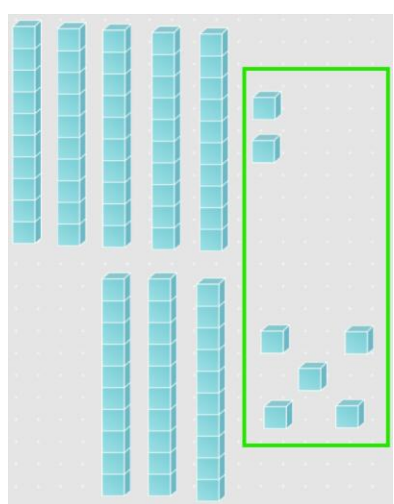
2. Now, because we are adding, you also need to show the number 35

	T	O
	5	2
+	3	5



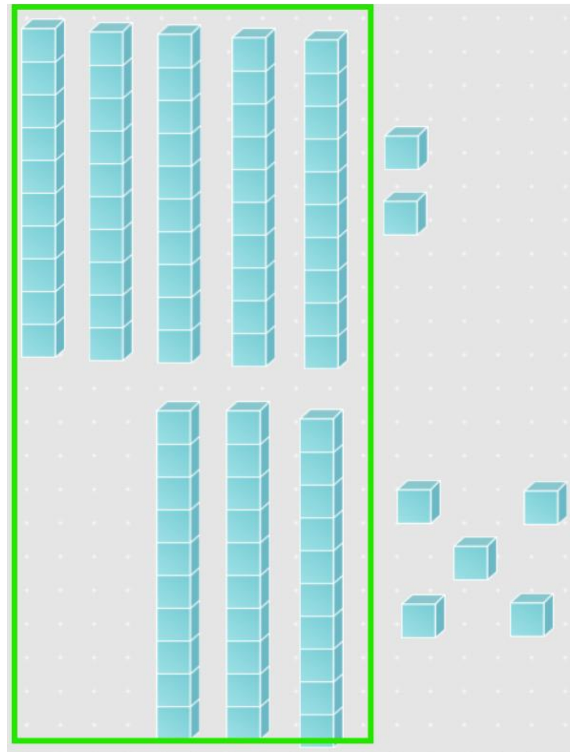
3. Now start with the ones. On top you have 2, which means you need to solve 2 plus 5.

	T	O
	5	2
+	3	5
		7



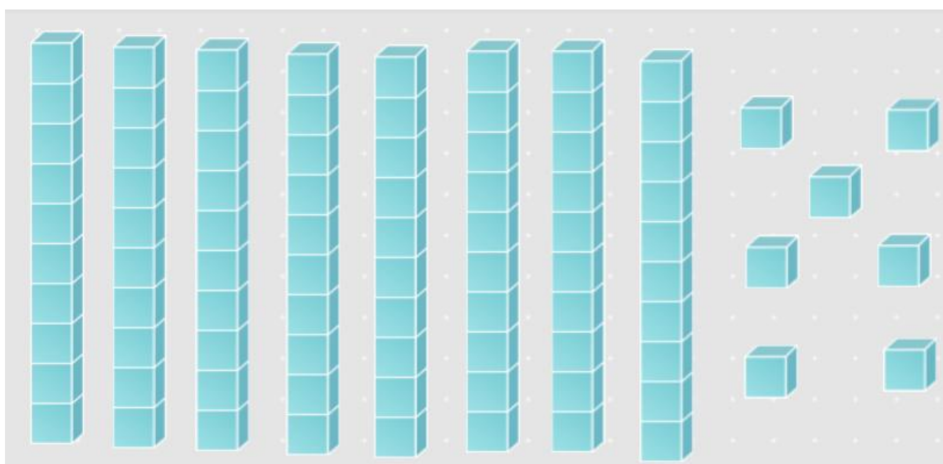
4. Continue with tens. On top you have 5, which means you need to solve 5 plus 3.

	T	O
	5	2
+	3	5
	8	7



5. Finally, the answer is 52 plus 35 equals to 87:

	T	O
	5	2
+	3	5
	8	7

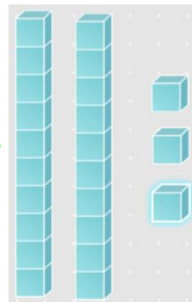


Exercise 2

$$\begin{array}{cc|c} & T & O \\ & 2 & 3 \\ + & 7 & 1 \\ \hline & 9 & 4 \end{array}$$

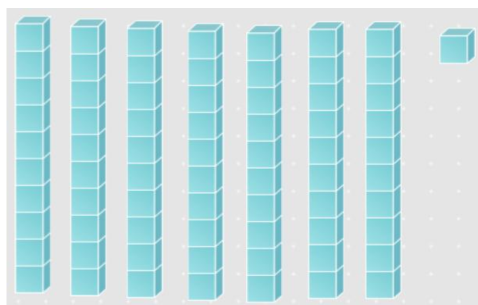
1. Represent the number on the top:

$$\begin{array}{cc|c} & T & O \\ & 2 & 3 \\ + & 7 & 1 \\ \hline & & \end{array}$$



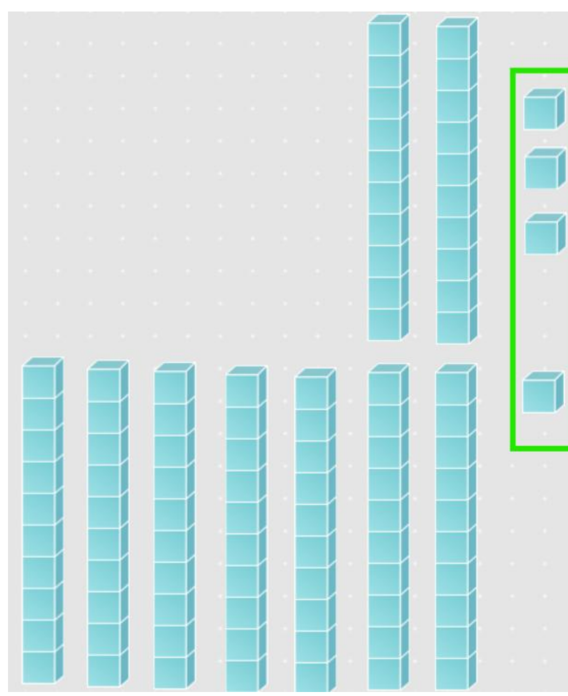
2. Now, because we are adding, you also need to show the number 71:

$$\begin{array}{cc|c} & T & O \\ & 2 & 3 \\ + & 7 & 1 \\ \hline & & \end{array}$$



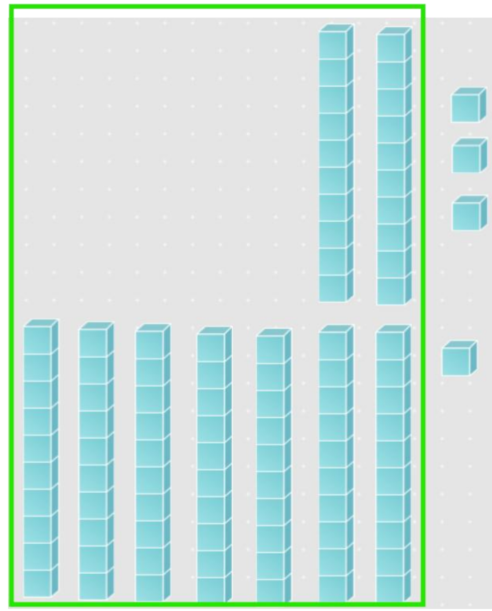
3. Now start with the ones. On top you have 3, which means you need to solve 3 plus 1:

$$\begin{array}{cc|c} & T & O \\ & 2 & 3 \\ + & 7 & 1 \\ \hline & & 4 \end{array}$$



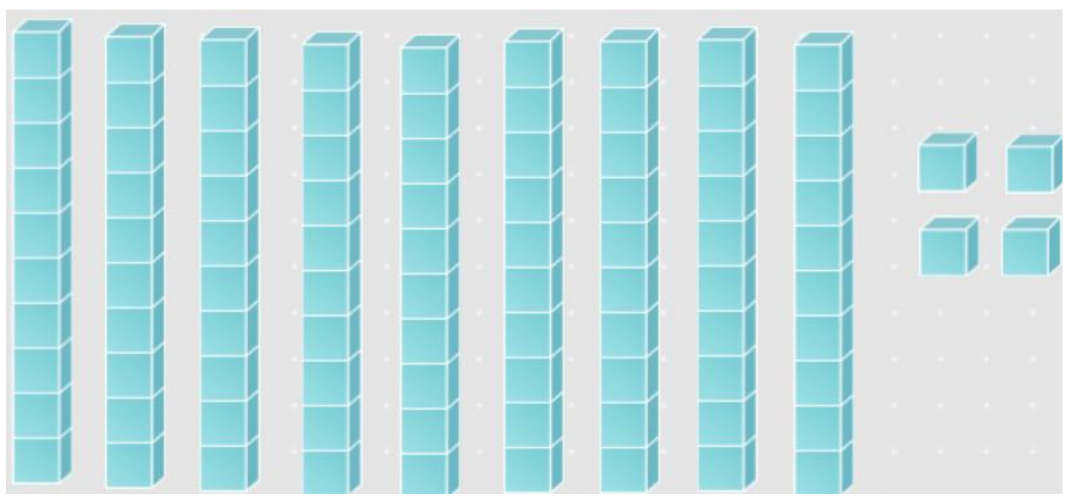
4. Continue with tens. On top you have 2, which means you need to solve 2 plus 7.

	T	O
	2	3
+	7	1
	9	4



5. Finally, the answer is 23 plus 71 equals to 94:

	T	O
	2	3
+	7	1
	9	4

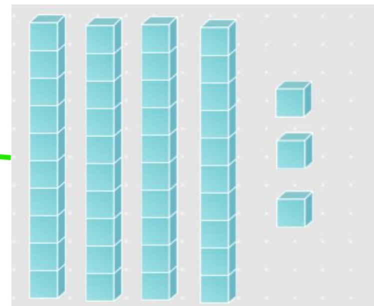


Exercise 3

$$\begin{array}{r|l} T & O \\ 4 & 3 \\ +\ 2 & 7 \\ \hline \end{array}$$

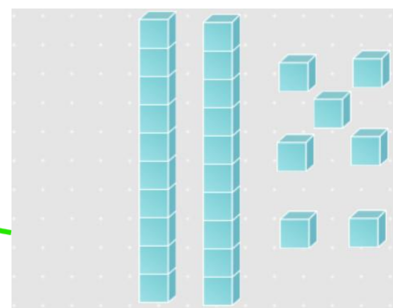
1. Represent the number on the top:

$$\begin{array}{r|l} T & O \\ 4 & 3 \\ +\ 2 & 7 \\ \hline \end{array}$$

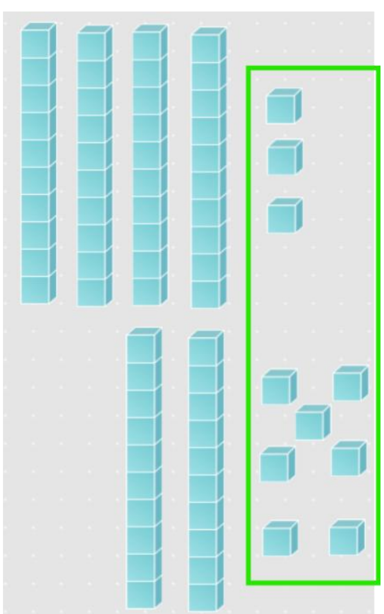


2. Now, because we are adding, you also need to show the number 27:

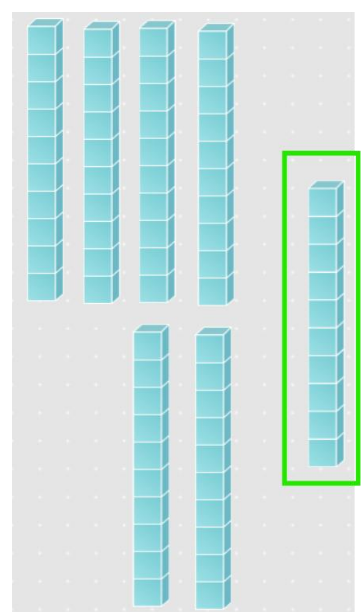
$$\begin{array}{r|l} T & O \\ 4 & 3 \\ +\ 2 & 7 \\ \hline \end{array}$$



3. Now start with the ones. On top you have 3, which means you need to solve 3 plus 7:



3+7=10, so make a ten



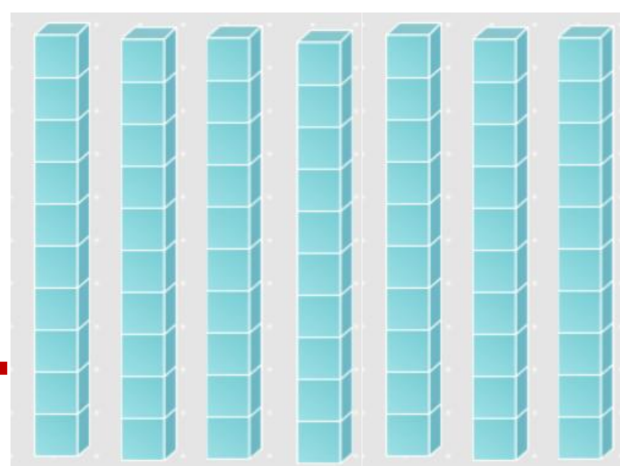
How many ones do you have?	Zero, so in ones place werite 0	$\begin{array}{r\|l} T & O \\ 4 & 3 \\ +\ 2 & 7 \\ \hline & \boxed{0} \end{array}$
You made a new group of ten, so put it in the tens place	How?	$\begin{array}{r\|l} T & O \\ 1 & \\ 4 & 3 \\ +\ 2 & 7 \\ \hline & 0 \end{array}$

4. Continue with tens. You have 1, 4 and 2 which means you need to solve 1+4+2:

$$\begin{array}{r|l} T & O \\ 1 & \\ 4 & 3 \\ +\ 2 & 7 \\ \hline 7 & 0 \end{array}$$

5. Finally, the answer is 43 plus 27 equals to 70:

$$\begin{array}{r|l} T & O \\ 1 & \\ 4 & 3 \\ +\ 2 & 7 \\ \hline 7 & 0 \end{array}$$

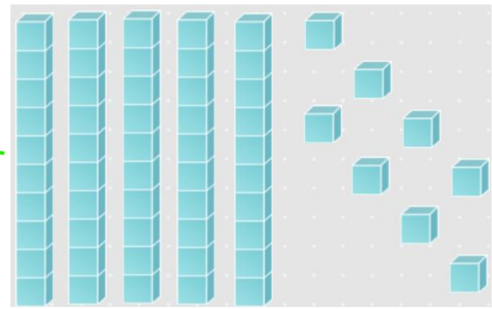


exercise 4

$$\begin{array}{rr|l} & T & O \\ & \color{green}{1} & \\ & 5 & 8 \\ + & 2 & 9 \\ \hline & 8 & 7 \end{array}$$

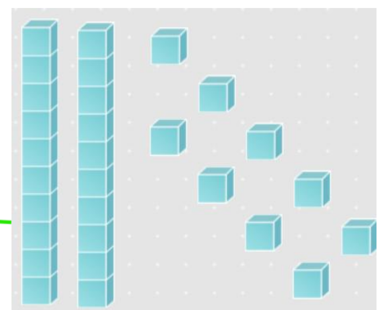
1. Represent the number on the top:

$$\begin{array}{rr|l} & T & O \\ & 5 & 8 \\ + & 2 & 9 \\ \hline & & \end{array}$$

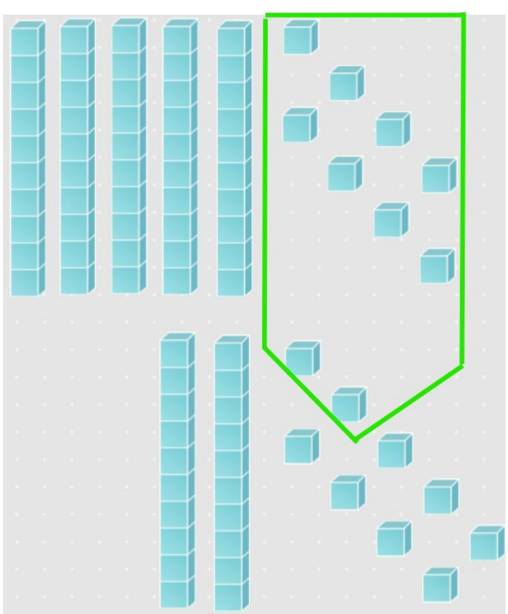


2. Now, because we are adding, you also need to show the number 29:

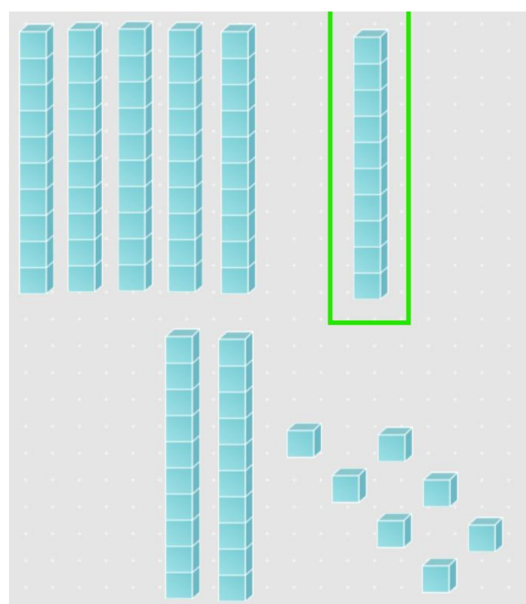
$$\begin{array}{rr|l} & T & O \\ & 5 & 8 \\ + & 2 & 9 \\ \hline & & \end{array}$$



3. Now start with the ones. On top you have 8, which means you need to solve 8 plus 9:



8+9=17, so make a ten



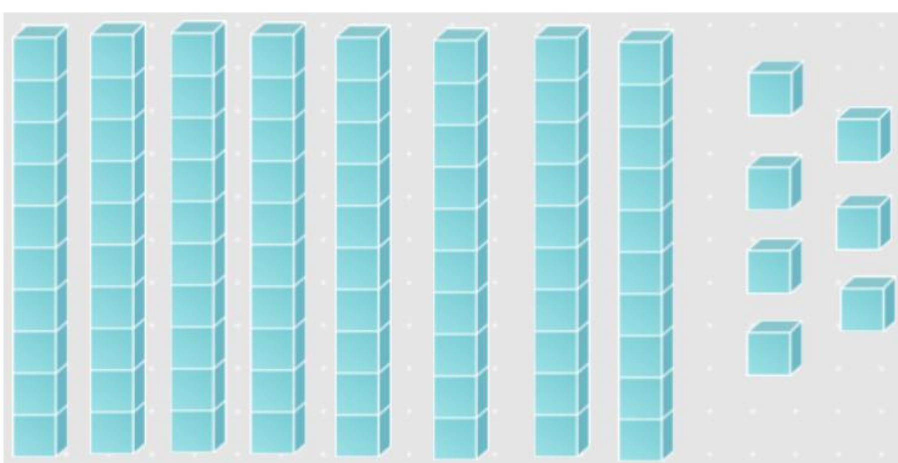
How many ones do you have?	Seven, so in ones place werite 7	$\begin{array}{cc\|c} & T & O \\ & 5 & 8 \\ + & 2 & 9 \\ \hline & & \boxed{7} \end{array}$
You made a new group of ten, so put it in the tens place	How?	$\begin{array}{cc\|c} & T & O \\ & 1 & \\ & 5 & 8 \\ + & 2 & 9 \\ \hline & & 7 \end{array}$

4. Continue with tens. You have 1, 5 and 2 which means you need to solve 1+5+2:

$$\begin{array}{cc|c} & T & O \\ & 1 & \\ & 5 & 8 \\ + & 2 & 9 \\ \hline & & 7 \end{array}$$

5. Finally, the answer is 58 plus 29 equals to 87:

$$\begin{array}{cc|c} & T & O \\ & 1 & \\ & 5 & 8 \\ + & 2 & 9 \\ \hline & 8 & 7 \end{array}$$



Manipulative Tool:

Base Ten Blocks
