

☀ Addition 1° - Regrouping

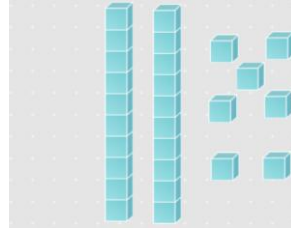

1. Represent the number on top and down:

$$\begin{array}{r|l} \text{T} & 0 \\ & 4 \ 3 \\ + & 2 \ 7 \\ \hline \end{array}$$

2. Represent the number down:

$$\begin{array}{r|l} \text{T} & 0 \\ & 4 \ 3 \\ + & 2 \ 7 \\ \hline \end{array}$$

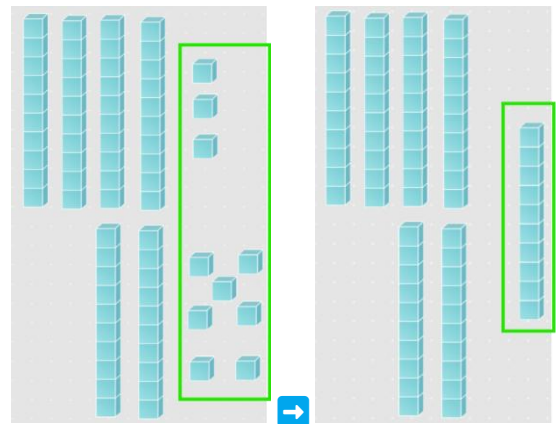

3. Now start with the **ones**. In this case you have $3+7=10$ ones, enough ones to make a ten.

Now, you don't have ones so put a zero in ones' place.

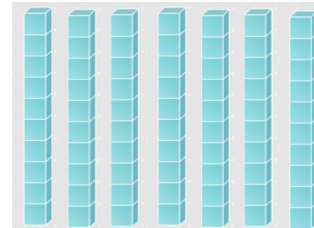

And you made a new group of ten, so put it in the tens place:

$$\begin{array}{r|l} \text{T} & 0 \\ & 1 \ 0 \\ & 4 \ 3 \\ + & 2 \ 7 \\ \hline & 0 \end{array}$$

4. Continue with tens. you have 1, 4 and 2 which means you need to solve $1+4+2$:

$$\begin{array}{r|l} \text{T} & 0 \\ & 1 \ 0 \\ & 4 \ 3 \\ + & 2 \ 7 \\ \hline & 7 \ 0 \end{array}$$

5. Finally, the answer is 43 plus 27 equals to 70:

$$\begin{array}{r|l} \text{T} & 0 \\ & 1 \ 0 \\ & 4 \ 3 \\ + & 2 \ 7 \\ \hline & 7 \ 0 \end{array}$$
