

☀ Subtraction 1° - Regrouping

1. Represent the number on top:

$$\begin{array}{r|l} \text{T} & 0 \\ 4 & 3 \\ - 2 & 7 \\ \hline \end{array}$$

2. Now start with the **ones**. Do you have enough ones to take away 7?

... No, you don't have enough ones, so you need to **regroup**. This means take a ten and break it into ones.

3. Now, you have 13 ones and 3 tens:

$$\begin{array}{r|l} \text{T} & 0 \\ 3 & 13 \\ \cancel{4} & \cancel{3} \\ - 2 & 7 \\ \hline \end{array}$$

4. Solve ones and then solve Tens:

$$\begin{array}{r|l} \text{T} & 0 \\ 3 & 13 \\ \cancel{4} & \cancel{3} \\ - 2 & 7 \\ \hline 1 & 6 \end{array}$$

So $43 - 27 = 16$

☀ Subtraction 1° - Regrouping

1. Represent the number on top:

$$\begin{array}{r|l} \text{T} & 0 \\ 4 & 3 \\ - 2 & 7 \\ \hline \end{array}$$

2. Now start with the **ones**. Do you have enough ones to take away 7?

... No, you don't have enough ones, so you need to **regroup**. This means take a ten and break it into ones.

3. Now, you have 13 ones and 3 tens:

$$\begin{array}{r|l} \text{T} & 0 \\ 3 & 13 \\ \cancel{4} & \cancel{3} \\ - 2 & 7 \\ \hline \end{array}$$

4. Solve ones and then solve Tens:

$$\begin{array}{r|l} \text{T} & 0 \\ 3 & 13 \\ \cancel{4} & \cancel{3} \\ - 2 & 7 \\ \hline 1 & 6 \end{array}$$

So $43 - 27 = 16$
